

HOW DO WE ADD VALUE TO YOUR BUSINESS?

Seasonal reports:

Commodityindia™ brings out crop survey based seasonal reports on Cardamom (Small), Chilli, Coriander, Cumin, Pepper, Turmeric and Minor Spices after extensive primary surveys. The seasonal report provides insights on acreage, expected yields, production estimation, cost of cultivation and besides a prediction on possible range of prices during arrival season. The seasonal report is released at the beginning of the arrival season. An update is sent after the completion of arrival season. It is a must have for every spices industry player with sizeable procurement exposure.

Fortnightly market insights services:

Fortnightly market reports supplement the crop surveys and seasonal reports and provide market commentary throughout the year. This is useful for procurement managers or traders who track the markets and procure / trade multiple times a year.

Daily market tracker:

Daily market tracker from Commodityindia™ provides a comprehensive list of spot price of spices traded in important production and terminal markets. For organisation with decentralised procurement, daily market tracker provides an unbiased reference.

Benefits:

- Seasonal reports help in optimising purchasing effectiveness
- Fortnight market reports provide year-round trading opportunities
- Daily market tracker provides an unbiased reference price for guidance
